

Lab Exercise 2- Working with Git Reset

Name: Viraj Bhidola

Sap ID: 500121825

Roll no.: R2142231731

Batch – 2

Lab Exercise: Git Reset

This lab exercise will guide you through the usage of the git reset command in various scenarios. The git reset command is used to undo changes in the Git history, working directory, or staging area. There are three main modes: **soft**, **mixed**, and **hard**.

Objective

- Learn how to use git reset to modify the commit history, unstage files, or discard changes.
 - Understand the differences between --soft, --mixed, and --hard reset modes.
-

Prerequisites

1. Install Git on your system.
2. Set up a Git repository:

```
git init git-reset-lab
```

```
cd git-reset-lab
```

Steps

1. Set Up the Repository

1. Create and commit an initial file:

```
echo "Line 1" > file.txt
```

```
git add file.txt
```

```
git commit -m "Initial commit: Add Line 1"
```

2. Add a second change:

```
echo "Line 2" >> file.txt
```

```
git commit -am "Add Line 2"
```

3. Add a third change:

```
echo "Line 3" >> file.txt
```

```
git commit -am "Add Line 3"
```

4. Check the commit history:

```
git log --oneline
```

Output:

```
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps> git init git-reset-lab
Initialized empty Git repository in C:/Users/ASUS/OneDrive/Desktop/DevSecOps/git-reset-lab/.git/
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps> cd git-reset-lab
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> echo "Line 1" > file.txt
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git add file.txt
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git commit -m "Initial commit: Add Line 1"
[master (root-commit) 6d6b71d] Initial commit: Add Line 1
1 file changed, 0 insertions(+), 0 deletions(-)
create mode 100644 file.txt
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> echo "Line 2" >> file.txt
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git commit -am "Add Line 2"
[master 26c473b] Add Line 2
1 file changed, 0 insertions(+), 0 deletions(-)
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> echo "Line 3" >> file.txt
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git commit -am "Add Line 3"
[master 5660cdc] Add Line 3
1 file changed, 0 insertions(+), 0 deletions(-)
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git log --oneline
5660cdc (HEAD -> master) Add Line 3
26c473b Add Line 2
6d6b71d Initial commit: Add Line 1
```

2. Use git reset --soft

This mode moves the HEAD pointer to an earlier commit but keeps the changes in the staging area.

1. Reset to the second commit:

```
git reset --soft HEAD~1
```

2. Check the commit history:

```
git log --oneline
```

3. Verify the staged changes:

```
git status
```

Output:

```
6d6b71d Initial commit: Add Line 1
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git reset --soft HEAD~1
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git log --oneline
26c473b (HEAD -> master) Add Line 2
6d6b71d Initial commit: Add Line 1
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git status
On branch master
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
        modified:   file.txt
● PS C:\Users\dimal\OneDrive\Desktop\DevSecOps\git-reset-lab> git reset --mixed HEAD~1
```

4. If needed, re-commit the changes:

```
git commit -m "Recommit Line 3"
```

3. Use git reset --mixed

This mode moves the HEAD pointer and unstages the changes but keeps them in the working directory.

1. Reset to the first commit:

```
git reset --mixed HEAD~1
```

2. Check the commit history:

```
git log --oneline
```

3. Verify the changes in the working directory:

```
git status
```

Output:

```
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git reset --mixed HEAD~1
Unstaged changes after reset:
M   file.txt
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git log --oneline
6d6b71d (HEAD -> master) Initial commit: Add Line 1
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git status
On branch master
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   file.txt

no changes added to commit (use "git add" and/or "git commit -a")
```

4. If needed, stage and re-commit:

```
git add file.txt
```

```
git commit -m "Recommit Line 2 and Line 3"
```

4. Use git reset --hard

This mode moves the HEAD pointer and discards all changes in the staging area and working directory.

1. Reset to the initial commit:

```
git reset --hard HEAD~1
```

2. Check the commit history:

```
git log --oneline
```

Output:

```
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git log --oneline
6d6b71d (HEAD -> master) Initial commit: Add Line 1
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab>
```

3. Verify the working directory:

```
cat file.txt
```

Output:

```
PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> cat file.txt
Line 1
```

5. Use git reset with a Commit Hash

1. Add some changes for demonstration:

```
echo "Line 2" >> file.txt
```

```
git commit -am "Add Line 2"
```

```
echo "Line 3" >> file.txt
```

```
git commit -am "Add Line 3"
```

2. Get the commit hash for the initial commit:

```
git log --oneline
```

3. Reset to the initial commit using the hash:

```
git reset --hard <commit-hash>
```

4. Verify the working directory and commit history:

```
git log --oneline
```

```
cat file.txt
```

Output:

```
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> echo "Line 2" >> file.txt
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git commit -am "Add Line 2"
[master 8f483d0] Add Line 2
 1 file changed, 0 insertions(+), 0 deletions(-)
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> echo "Line 3" >> file.txt
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git commit -am "Add Line 3"
[master f11a6e4] Add Line 3
 1 file changed, 0 insertions(+), 0 deletions(-)
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git log --oneline
f11a6e4 (HEAD -> master) Add Line 3
8f483d0 Add Line 2
6d6b71d Initial commit: Add Line 1
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git reset --hard 6d6b71d
HEAD is now at 6d6b71d Initial commit: Add Line 1
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> git log --oneline
6d6b71d (HEAD -> master) Initial commit: Add Line 1
● PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> cat file.txt
Line 1
○ PS C:\Users\ASUS\OneDrive\Desktop\DevSecOps\git-reset-lab> |
```

Summary of Commands

Mode	Effect	Command Example
--soft	Moves HEAD, keeps changes staged.	git reset --soft HEAD~1
--mixed	Moves HEAD, unstages changes, keeps them in working dir.	git reset --mixed HEAD~1
--hard	Moves HEAD, discards all changes in staging and working dir.	git reset --hard HEAD~1
